## LOS ANGELES MUNICIPAL APPROVAL

ZEBRON® HAS BEEN APPROVED BY THE LOS ANGELES BUREAU OF ENGINEERING FOR USE IN SEWAGE TREATMENT PLANTS.

The City of Los Angeles is widely recognized for its screening and testing of materials for construction of sanitary plants and other municipal facilities. Approval of a material by its Bureau of Engineering gives automatic acceptance by many other municipalities and sanitation districts.

Mr. Masaru Ito, Division Head, General Services/Standards, states that "the material was tested for tensile strength, elongation, wear resistance, tear resistance, compressive strength, hardness, tensile adhesion strength, bacteriological and chemical resistance to different chemical solutions", and that the "ZEBRON® coating is satisfactory for intended use."

"Technical data is afforded solely for your evaluation, independently of the sale of any product and on the understanding that Reliance neither undertakes any obligations or liability for results obtained nor gives any authorization or assurance in the area of patent infringement".
