

Zebron Lined Meter Vaults

Meter vaults house subterranean public utility equipment such as valves for water or natural gas pipes, or switch gear for electrical or telecommunications equipment.

Water

Leaking meter vaults fill with ground water, require pumping, create access problems and damage equipment.

STOP

Active infiltration can be stopped with Zebron ZG-23 multigrout.

PROTECT

Utility vaults of all shapes, dimensions and conditions can be rehabilitated and lined using ZEBRON # 386 to completely seal and preserve public utility equipment.
