

WASTEWATER

Years of extensive exposure have proven Zebtron's ability to protect concrete and steel from sulfuric acid, hydrogen sulfide gas along with the many other chemicals found/utilized in the wastewater environment.

Wastewater Treatment

In a series of tests made by the Bureau of Reclamation for the EPA, Zebtron coatings showed no defects when immersed in oxygenated wastewater for periods of 28 months. Of 13 products tested, it was one of only two products to show no defect throughout testing.

Zebtron offers excellent resistance to acids, bases and salts, making it a superior coating for all stage/sanitation applications.
